Context and Problem Statement

- Develop "MediaForge," a C++ application to -automate library management.
- Handle loans and returns instantly.
- Create an OOP hierarchy for all media types.
- Ensure permanent storage using text files.
- Generate reports and audiovisual statistics

Objectives

- Develop "MediaForge," a C++ application to -automate library management.
- Handle loans and returns instantly.
- Create an OOP hierarchy for all media types.
- Ensure permanent storage using text files.
- Generate reports and audiovisual statistics

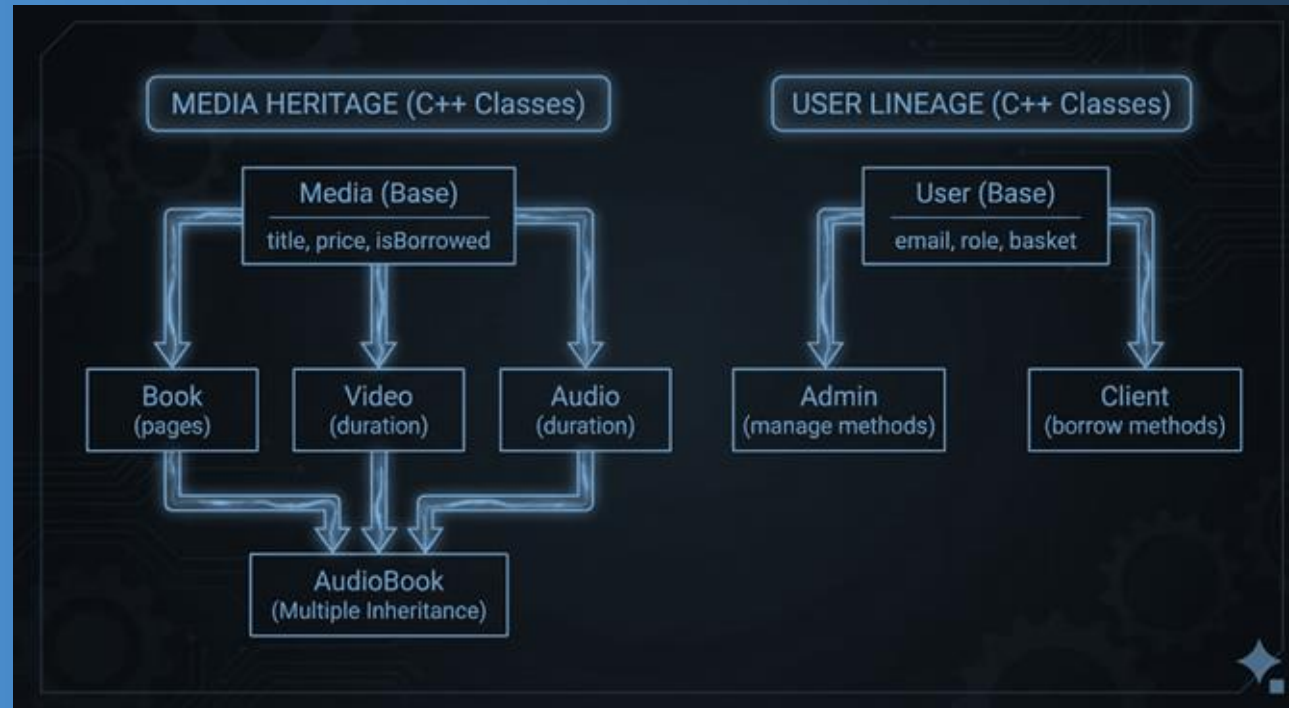

Analysis and Requirements

- Content management
- The user experience
- The transactional logic

Technical Solution and Architecture

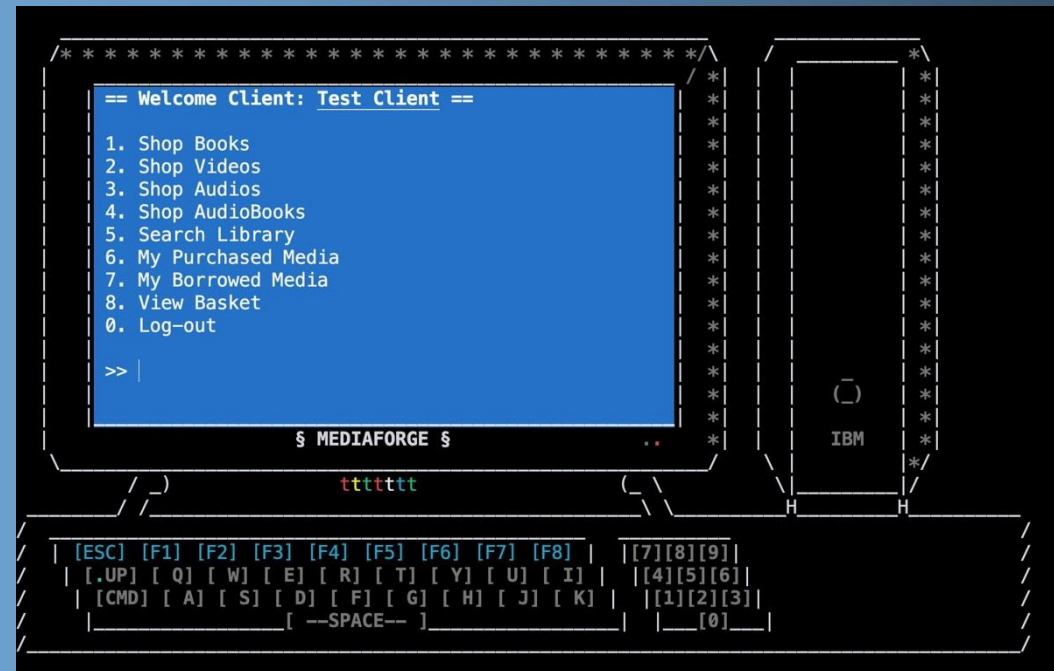

- Due to console limitations, media playback is handled through external applications to ensure a smooth user experience
- The interface uses ANSI escape codes and cursor control to render a dynamic, colored terminal UI from a single managed screen state

Technical Solution and Architecture

Demonstration

-Testing phase

Conclusion and Perspectives
